Managed Firewall

Next-gen network defense made simple and affordable

Digital initiatives, tele-health, remote work, and distributed office locations are testing the bounds of traditional perimeter-based security.

While the data center still exists, it is no longer the nucleus of the healthcare organization's IT operations. Systems, applications, and protected health information can reside anywhere – from the ground to the cloud, to third-party services – and in distributed and hybrid networks. Users and clinicians now access these assets from multiple locations and multiple devices.

As a healthcare organization extends its reach into new environments, it also extends its attack surface. Consistent protection is critical along the network edge.

PatientLock's Managed Firewall adds critical functionality that strengthens a healthcare organization's defense of its users, patients, and digital assets in a modern, perimeter-less world.

Everything a Traditional Firewall does – and more

Edge Protection

Unified Threat Management Capabilities

Web & Content Filtering

Anti-Virus, Anti-Malware

Centralised Management

Network Segmentation

VPN

SD-WAN

Deep Packet Inspection

Branch Offices

Partners & Contractors

Cloud

Data Center

Third-Party Services

THE EDGE

SILVERSKY SECURITY DEVICE MGMT

Remote Workers

On-Site Workers

PatientLock's Managed Firewall

Managed Firewall - Extending threat detection to new environments

PatientLock's Managed Firewall service is a network gatekeeper, but its role and supporting functionality have evolved to protect beyond traditional on-prem workloads and perimeters to address the security challenges along a health organization's extended network edge.

In addition to traditional firewall port/protocol inspection and blocking techniques, PatientLock Security Device Management adds comprehensive application-level inspection, intrusion prevention, and intelligence from sources outside the firewall. PatientLock monitors the managed device and will react proactively to protect your assets against an attack while it is happening.

Every healthcare organization has unique requirements, and PatientLock offers a range of service capabilities to cover the unique needs of today's modern network edge.

PatientLock's Managed Firewall has you covered.

Managed Protection

We take on the burden and complexity of managing and monitoring your firewall. You focus on treating your patients – we'll focus on keeping you safe.

Affordable Peace-Of-Mind

Our managed model levels the playing field to deliver cost-effective security device management that scales to meet healthcare's changing needs.

On-Demand Access

All healthcare organizations face risk. PatientLock provides access to enterprise-grade technology along with the expertise to run it.

PatientLock Managed Firewall sets the standard for powerful edge security — delivered as a worry free, cost effective managed service.
