

Multi-factor Authentication

Scalable Access Security That's Simple and Powerful

Get secure access for any user and device to any environment, from anywhere.

The recent shift to hybrid work models and perimeter-less environments amplifies the need for security to shift too. Today, data and applications no longer sit behind a corporate firewall – and some of your users may not either.

With more people using personal devices and working remotely, you need assurance that only the right users and secure devices are accessing your applications and systems. The use of strong authentication increases your security, but not all solutions are the same. Cost, flexibility, and the complexity of deployment and use can vary across solutions.

PatientLock multi-factor authentication (MFA) has you covered with secure access that doesn't stand in the way of doing business or seeing patients:

Trusted Access

Users provide a password PLUS a second source of validation (e.g., authorization code) to verify their identity before access is granted.

User-friendly

Intuitive with fast set up and multiple authentication options to choose from, our MFA solution keeps users secure without being disruptive.

Fast Deployment

Add MFA to any existing environment or platform – fast. Our self-enrollment feature makes it easy for users to get set up.

Scalable

We make it easy to set up new users, support new devices, and protect new applications – without impacting existing technology.

PatientLock MFA

A Win-Win for Your Users and Your Security Team

It's time to go beyond basic protection and PatientLock MFA is a smart step. Don't let your users hold the door open for an attacker by requiring only a username and password to validate identity.

PatientLock MFA provides strong, trusted access protection across any environment.

Our MFA service manages industry leading technologies on your behalf, enabling your users quick and easy access to applications. With multiple authentication options, users can choose the method that's most convenient for them, without disrupting productivity.

PatientLock makes access to strong MFA affordable and simple. Our flexible, cloud-based solutions are easy to deploy, and designed to avoid any disruption to patient throughput.

Intuitive User Experience & Strong Protection

- ✓ Verify identity in seconds
- ✓ Protect any application on any device
- ✓ Deploy in any environment
- ✓ Multiple authentication methods (push, biometrics, OTP, hardware and software tokens, TouchID, SMS)

PatientLock MFA has you covered with secure access for users and devices in any environment.
